RMSE vs forecast horizon

Per-cell RMSE (std log-IV) — each panel is one model

R^2 vs persistence per cell (red = worse than persistence)

Winner per cell (lowest RMSE)

R² vs persistence by surface zone

R² vs persistence by calendar regime

R^2 vs persistence by horizon, faceted by regime

Diebold-Mariano pairwise — color: $-\log_{10}(p)$, sign: row vs col

Per-window MSE over time, regime-shaded

Example forecast — covid: target 2020-03-23 (h=21)

Example forecast — bear: target 2022-06-15 (h=21)

Example forecast — calm: target 2023-08-15 (h=21)
